## INTRODUCTION

Mississippi's 2012 Section 303(d) List of Impaired Water Bodies fulfills the state's obligation with respect to §303(d) of the Federal Clean Water Act to develop a listing of the state's impaired waters. MDEQ provides two reports, this §303(d) list and a §305(b) report. These are not physically integrated, but the lists are meant to have a one-to-one relationship in that all of the water body segments found in the §305(b) report listed in category 5 are also listed in this document. This §303(d) document includes tables showing the impaired water bodies in each of the state's river basins. These basins are shown on the map on page 4.

1. Big Black River Basin
2. Coastal Streams Basin
3. North Independent Streams Basin
4. Pascagoula River Basin
5. Pearl River Basin
6. South Independent Streams and Lower Mississippi River Basins
7. Tennessee River Basin
8. Tombigbee River Basin
9. Yazoo River and Upper Mississippi River Basins

## Regulatory Requirement

Section 303(d) of the Clean Water Act and the implementing federal regulations at 40 C.F.R. §130.7 require the state to identify those waters within its jurisdiction for which effluent limitations are not sufficient to implement one or more applicable water quality standards and for which TMDLs are not yet completed. The state is to establish a priority ranking for such waters, taking into account the severity of the pollution and the designated uses to be made of such waters.

## ASSESSMENT METHODOLOGY

Assessments for 2012 are based on current site-specific monitoring data believed to accurately portray existing water quality conditions. A water body is considered monitored if sufficient (in quantity, quality, and frequency) physical, chemical, biological, bacteriological, and/or fish tissue data were collected and assessed on the water body data from January 1, 2006 to December 31, 2010.

Physical and chemical data include such parameters as pH, temperature, dissolved oxygen, toxicants, turbidity, total dissolved solids (TDS), and specific conductance. Biological data include the community structure of aquatic insects, other macroinvertebrates, fish, and/or algae. Bacteriological data include water column surveys for fecal coliform bacteria, *E coli*, or enterococci bacteria. Fish tissue data include the analyses of fish flesh for the presence of toxic organic chemicals and metals. The length of record of the data, the quality of the data, and the frequency at which the data are collected were considered in making use attainment decisions. In general, data used for use support attainment decisions were collected, analyzed, and

interpreted in a manner consistent with state and EPA guidelines and in such a way as to allow for the accurate interpretation of the state's water quality standards. The details of the assessment methodology can be found in the state's *Mississippi CALM [Consolidated Assessment Listing Methodology] for 2012*, [CALM] (MDEQ, 2011).

For 2012, MDEQ considered all known and readily available information on the quality of the state's waters in conjunction with the rotating basin approach and MDEQ's §305(b) assessment program. However, only data that allowed for the accurate interpretation of the state's water quality standards or provided compelling evidence were used for §303(d) listing decisions.

## **Fish and Shellfish Consumption Advisories and Impaired Waters**

Non-attainment of the fish consumption use was assessed for a water body based on the presence of a fish consumption advisory supported by fish tissue monitoring data. Water bodies with fish consumption advisories, "restricted" or "no consumption," were assessed as not attaining the fish consumption use support designation.

Coastal water bodies with the Shellfish designated use that have consumption advisories are not included in the 2012 §303(d) List because these waters already have completed TMDLs for pathogens. These TMDLs are available for review on MDEQ's website.

## **LAYOUT OF THE TABLES**

### **Description of Table**

The table is sorted alphabetically by the River Basin then by the water body name. The water body general location is given for the segment including a community located near the water body segment. The extent of the segment is described beginning with the upstream boundary thence to the downstream boundary.

The historical or current water body ID along with the counties the segment is located is included. The USGS hydrologic unit code 8-digit (HUC) is also given for the segment. The impaired use refers to the designated use associated with the pollutant cause shown. If there are multiple pollutants and/or uses for a water body, these are shown as multiple listings for the water body.

The table also gives the MDEQ due date for the TMDL and the year the segment was originally included in the §303(d) list. The due date, which is 13 years after initial listing, is determined from EPA guidance. These water segments will have TMDLs completed in accordance with EPA rules and regulations.

## **Water Body Identification Numbers**

### **Historical Numbering System**

The historical water body identification number for each water body listed contains a reference to the watershed of its location. Mississippi's river basins were divided into 482 watersheds. The specific location of a water body can be found by finding its ID next to a highlighted stream on one of the maps or by comparing the first three numbers in the water body's ID to the watershed numbers shown on the basin maps. For example, MS457E, Annas Bottom, is located in watershed 457 near Natchez. There are a few of these identified segments on the 2012 list.

### **Exceptions to the Historical Numbering System**

There are some exceptions within this numbering convention. Namely, when a water body serves as a boundary between two watersheds, the water body is identified by an abbreviation of the water body's name. For example, water body MSBGCHTRM2 is the identification for the Bogue Chitto River.

### **Intermediate Numbering System**

In the 2002 and 2004 §303(d) lists, MDEQ used a numbering system based on identification of the river basin and the 11-digit USGS HUC system. This system was updated in 2006.

### **Current Numbering System**

MDEQ and USGS completed work on the new 12-digit watershed based delineation of Mississippi in 2005. MDEQ incorporated this new delineation into the identification numbering system for water body segments in the states 2006 §305(b) report. This will be used for future §303(d) waters added to the list.

The new delineated subwatersheds are smaller in size than the watersheds used in the 2004 list. Whereas the previous numbering system relied upon the river basins being divided into 482 watersheds, the new numbering system includes 1294 subwatersheds. Each new water body segment in the 2006 and 2008 lists were identified by a six digit numeric code. This 2012 §303(d) list will use the same numbering system. The first digit identifies which basin contains the water body. The major river basins are numbered 1 through 9 in alphabetical order (1 for the Big Black River Basin, 2 for the Coastal Streams Basin, through 9 for the Yazoo Basin.) [See map on page 4.]

The next three digits in the six digit water body identification number refer to the specific subwatershed within that basin. Each major river basin has the subwatersheds it contains numbered beginning with 1 (subwatershed 146 located in the Big Black River Basin would be numbered 1146, subwatershed 74 located in the Pascagoula River Basin would be numbered

4074.) Within the Yazoo River Basin, the subwatersheds located in the Hills region are numbered beginning with 1 and the subwatersheds located in the Mississippi River Delta are numbered beginning with 500. The final two digits in the six digit water body identification number refer to a specific stream segment within the specified subwatershed. For instance, Beaver Creek, water body ID 521413, is stream segment 13 in subwatershed 214 in the Pearl River Basin.

## **Basin Maps**

Maps are included in Appendix A for each basin. Streams shown in blue are the impaired stream segments. In some river basins, the maps were split into 8-digit Hydrologic Unit Codes to better fit the page.

## **TMDLs SCHEDULED FOR THE NEXT TWO YEARS**

For water body listings added as a result of recent monitoring, MDEQ anticipates developing these TMDLs within 13 years of the original listing. The TMDL projected completion dates given in the table are based on plans developed between MDEQ and EPA for TMDL development for the next two years. These dates are given for information only and are not a commitment by MDEQ of TMDL completion.

## **TMDL PRIORITIZATION**

MDEQ will follow the basin plan to develop TMDLs in conjunction with monitoring and implementation activities associated with the basin plan and its progress through the various river basins. TMDLs will be prioritized based on the pollutant of concern, the basin plan rotation, and the designated use of the water.

## **PUBLIC PARTICIPATION AND APPROVAL PROCESS**

MDEQ notified the public of the availability of this document by publishing a Public Notice in a statewide newspaper as well as selected regional newspapers. Additionally, MDEQ sent notices of availability to those addressees on the TMDL notification list.

The public was invited to comment on the content of this document. The Public Notice period began on April 1, 2012 and went until May 1, 2012. Comments were requested by mail or electronic submission and in person at a Public Hearing held in MDEQ's offices on May 1, 2012. This proposed document will be submitted to the Mississippi Commission on Environmental Quality for adoption. Once adopted by the Commission, the 2012 §303(d) List will be submitted to EPA Region 4 for final approval, and then the Mississippi 2012 §303(d) List of Impaired Water Bodies will be filed with the Mississippi Secretary of State in compliance with state law.

Basin	Water Body Name	Water Body ID	County	USGS HUC	Impaired Use	Pollutant	TMDL Due Date	Location	Original Cycle
BIG BLACK RIVER	ATWOOD CREEK	103012	ATTALA	8060201	Fish & Wildlife	Biological Impairment	4/1/2021	NEAR KOSCIUSKO FROM HEADWATERS TO MOUTH AT APOOKTA CREEK	2008

## **Appendix A Atlas**

Maps are included in Appendix A for each basin. Streams shown in blue are impaired streams. In some river basins, the maps were split into 8-digit Hydrologic Unit Codes to better fit the page. Basins with no current listings are not included.
